With spectacularly beautiful colour photographs and an easy understandable text **The Buzz about Bees** tells the story of honeybees in a new perspective. Based on the latest data, notably from his own research group, Jürgen Tautz provides a wonderful insight into the realms of bees. The entire range of astonishing bee activities is described. Remarkable action photographs never shown before present bees busy with cell cleaning, caring for the brood, serving in the queen's court, visiting flowers, receiving nectar, producing honey, comb building, entrance guarding, heating and cooling. Spotlights include bees grooming, swarming, fighting, telephoning, sleeping and communicating by high-toned beeping, scents and dances.

- With some 230 fascinating high quality colour photographs
- Written in an entertaining easily understandable way
- The new fundamental bee book following the standard work of Karl von Frisch
